

PRESS RELEASE

2008-10-14

More electricity meters to Eritrea!

10 000 electric meters, which was sent from Sweden on September 18 are expected to arrive to the port city of Massawa in Eritrea this week.

Swedish-Eritrean Forum for Development Cooperation (S-ERI Forum) and the "Light for Our People" project continues to send electricity meters to Eritrea. You are invited to support the project through our Plus giro: 31 74 76-0

For the second time [Umeå Energi](#) chooses to donate about 9 000 of the city's replacement electric meters for the benefit of rural electrification in Eritrea. In December 2007, the energy company donated 11 000 fully functioning electricity meters to Eritrea. About 1 400 of the meters were donated by [Lunds Energi AB](#) - a company that has been a frequent contributor to the project for several years now. In addition to this, about 700 fuses that were donated by the Uppsala company, [Kontex AB](#) are included in the container to Eritrea.

We direct our gratitude to Volvo Employee Help Association, which for the third time funded most of the transportation cost within Sweden and for the large container from Gothenburg to the port city of Massawa. S-ERI Forum also extends its sincere thanks and appreciation to the three companies who donated the meters and fuses.

The goods were packed by members of the Eritrean Community in Umeå and S-ERI Forum members in Gothenburg. Our sincere thanks! Thanks also to those who bought the promotional cap for the support of the project.

S-ERI Forum further pledges its efforts for the national development of Eritrea through similar activities. It also takes this opportunity to invite all concerned to become supportive members.
